ENCODER PRODUCTS COMPANY

May 28, 2026

Dear Customer,

Due to the design and operating principles of our Accu-Coder™ products, periodic calibration is not required. The output resolution and performance characteristics are determined by fixed mechanical and electronic components and are not subject to drift through normal operation or time in service.

All encoders are tested and verified prior to shipment to ensure conformance to published specifications and applicable quality requirements.

Sincerely,

Scott Coll
Chief Quality Officer
Encoder Products Company
